01 Problem

- Small game teams need hundreds of 3D assets. Most have **no dedicated 3D artist**.
- Doing it in-house means Blender or Maya: **~3 months** to learn, **~$10K/seat** in hardware and licences, crashes that lose work.
- Desktop 3D tools are single-user. Teammates wait in line for one file.

$180–1,000 per asset from a freelancer, incl. iterations, and **24+ hours** of waiting. Vi3W: **$19/mo** for up to 100 assets.

02 Solution

Sketch
Draw on a napkin or in the canvas, add a one-line prompt.

→

AI builds it
Image + 3D pipeline turns it into a textured model in **~3 min**.

→

Edit & ship
Tweak in the browser, export to any format for the game engine.

Live: sketch-to-3D · **Live: text-to-3D** · **Live: 3D editing + export**
Next: real-time team collaboration

03 Why now

- **Open 3D models got good in 2025.** TRELLIS and Hunyuan3D made usable meshes from one image. A solo founder can now build what took a studio.
- **WebGPU ships in every major browser.** Real 3D editing runs without installs, licences or a gaming PC.
- **More games, same artists.** Steam releases rose from **14,111 (2023) to 19,008 (2025)**, mostly from small teams.

04 AI edge & moat

Model-agnostic pipeline. Each step routes to the best model (Hunyuan3D, TRELLIS, Flux, Nano Banana). Better models make Vi3W better, not obsolete.

Data: sketch-to-model pairs from every generation. Individuals opt in to training. Company work is never used without consent.

Distribution: 3M+ organic views and a 1,000-member Discord at **$0 paid acquisition**.

Lock-in (next): one share link pulls the whole team in. Projects, versions and approvals live on Vi3W.

Why not a wrapper? Generators output a mesh. Vi3W owns the work around it: sketch input, editing, export and team review. Swap the model, keep the workflow.

05 Team

AP

Aman Porwal, 24 · Founder & CEO · full-time

- Ex-**Product Manager, nRev.ai**. Built Vi3W's full sketch-to-3D pipeline solo.
- **Research Fellow, Manastu Space**. Project flew on ISRO's **PSLV-C60** (Dec 2024).
- Ran 3D services for game studios in Europe and China: **$10K in 3 months**.

Backed by: AI Grants India

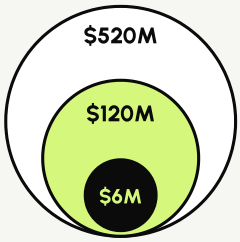

First hires (this round): 3D/ML engineer, full-stack engineer

Advisors: TBD

Pilot users from teams at
Google · Adobe · Sony · Manastu Space · Emergent

06 Market

TAM	**$520M/yr**	1.5M active game creators (Unity) × $348/yr
SAM	**$120M/yr**	~200K small teams shipping games × $600/yr
SOM	**$6M ARR**	10K paying teams = 5% of SAM in 3 yrs

Sources: 42matters (150K Play game devs), Steam 2025. **Next:** CAD + robotics sim data (unsized).

07 Traction

- **30%** return weekly
- **1,000** Discord members
- **3.1M** IG views / 30 days
- **$10K** services, 3 mo
- Export rate TBD

"We face this problem every single day. Vi3W is a huge time and cost saving for us."
Pilot user · TBD: name, role, studio

08 Business model

PLAN	PRICE	CREDITS / MO	ASSETS / MO	FOR
Indie	**$19**	1,000	≤100	Solo
Pro	**$29**	3,500	≤600	Heavy use
Studio	**$149**	18,000	≤3,500	Teams

$0.08–1 compute per generation

~90% gross margin at pilot usage*

~$0 CAC to date, all organic

TBD LTV, payback after 30 Oct launch

*~5 gens/user/mo × ~$0.30 vs $19+ plan. Verify post-launch.

09 Competition

	SKETCH	FAST	BROWSER	TEAM	GAMES
Vi3W	✓	✓	✓	**Q1 '27**	✓
Meshy · Tripo · Rodin	image	✓	✓	×	✓
Kaedim	image	hours	✓	partial	✓
Spline	×	partial	✓	✓	×
Blender · Maya	×	×	×	×	✓
Freelancer	$180–1,000 per asset, 24+ hrs per round				

Our edge: the only tool that starts from a rough sketch and keeps the whole team iterating on one model in the browser.

10 Roadmap · next 18 months

Oct '26
Paid plans live, Pvt Ltd incorporated

Nov '26
Public launch: Product Hunt, Reddit

Q1 '27
Team collaboration live, 2 engineers hired

Q3 '27
$25K MRR, 600+ paying teams

Q1 '28
First CAD / robotics sim pilot, raise seed

11 Go-to-market

- **Beachhead:** solo and small (<10) mobile and indie game teams.
- **Product-led:** free tier → Indie/Pro. Inviting a teammate moves the account to Studio ($149).
- **Channels:** 3D reels (3M+ views), Reddit and Discord game-dev communities, Product Hunt launch Nov 2026.

12 Risks & mitigation

- **Big players add sketch-to-3D.** Stay model-agnostic; own the team workflow single-user tools lack.
- **Model-provider cost and access.** Move core steps to self-hosted TRELLIS / Hunyuan3D; credits cap cost per plan.
- **Solo founder.** 2 engineering hires funded by this round; advisor search under way.

13 The ask

$500K

SAFE / iSAFE · **$3.3M post-money cap**
~20 months runway · burn today $1–2K/mo

Product & eng (2 hires) · GPU & inference · Growth & community · Salary, ops, legal

Unlocks: $25K MRR, 600+ paying teams, team collaboration shipped and a first CAD/robotics pilot, ready for a seed round.

5-year vision: start with game assets, then become where every physical object is designed in 3D first: game-ready, CAD-ready and simulation-ready for robotics.
